

Odd Items UI

Even Items UI

You need to show list of users along with their items. Details are as follows:-

API: GET <http://sd2-hiring.herokuapp.com/api/users?offset=10&limit=10>

offset: position where you need to start your users.

limit: number of users you want to fetch in single hit.

## Instructions

- 1: User item images should be square.
- 2: Horizontal and vertical spacings between every image should be equal as shown in the wireframes on the left.
- 3: If items are even, then display them 2 in each row.
- 4: If items are odd, display the first one to span the full row, and show the remaining spanning 2 in each row.
- 5: Implement pagination since the list is very long.
